# Übungen

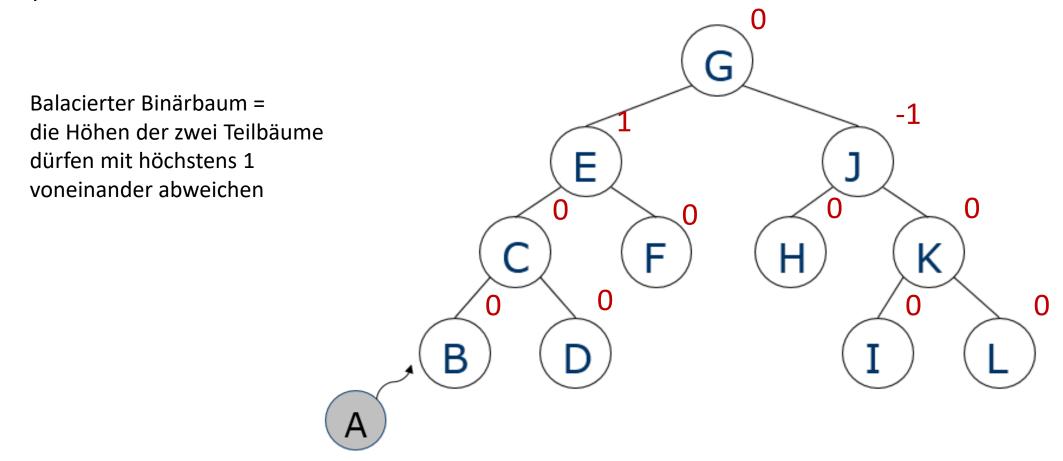

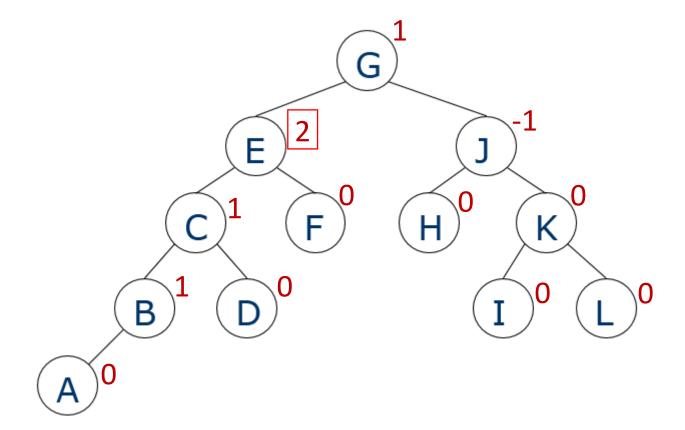

Balacierter Binärbaum = die Höhen der zwei Teilbäume dürfen mit höchstens 1 voneinander abweichen

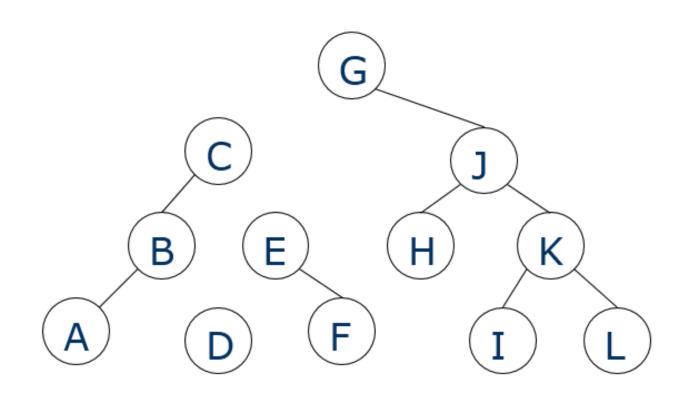

Balacierter Binärbaum = die Höhen der zwei Teilbäume dürfen mit höchstens 1 voneinander abweichen

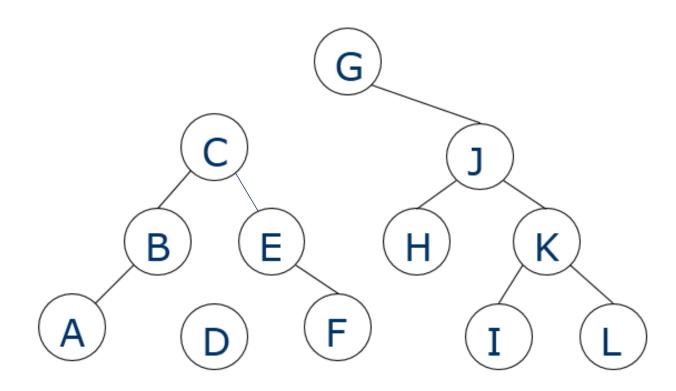

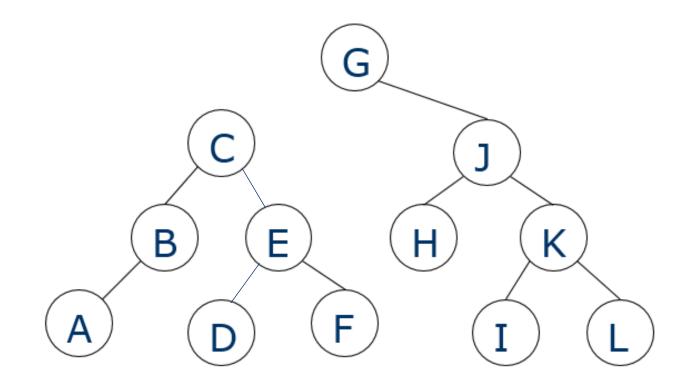

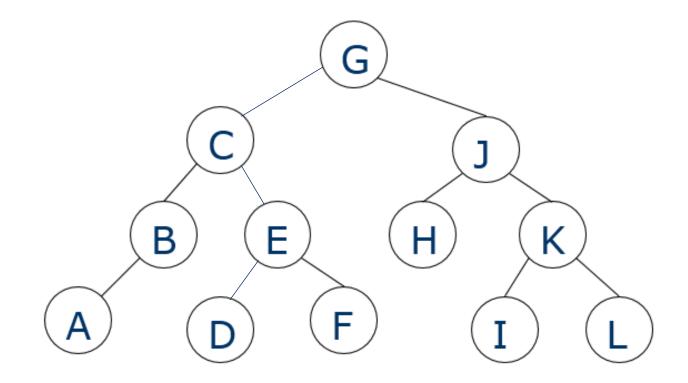

• Der Knoten *E* wird das rechte Kind des Knotens *C* 

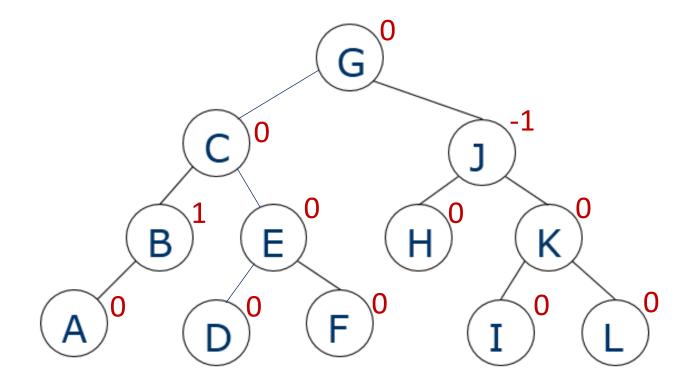

- Der Knoten *E* wird das rechte Kind des Knotens *C*
- Der Knoten D wird das linke Kind des Knotens E

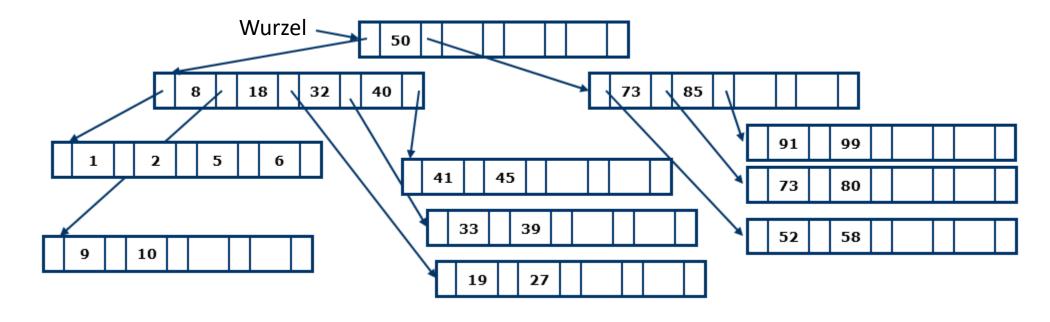

- Der Knoten E wird das rechte Kind des Knotens C
- Der Knoten D wird das linke Kind des Knotens E
- Der Knoten C wird das linke Kind des Knotens G

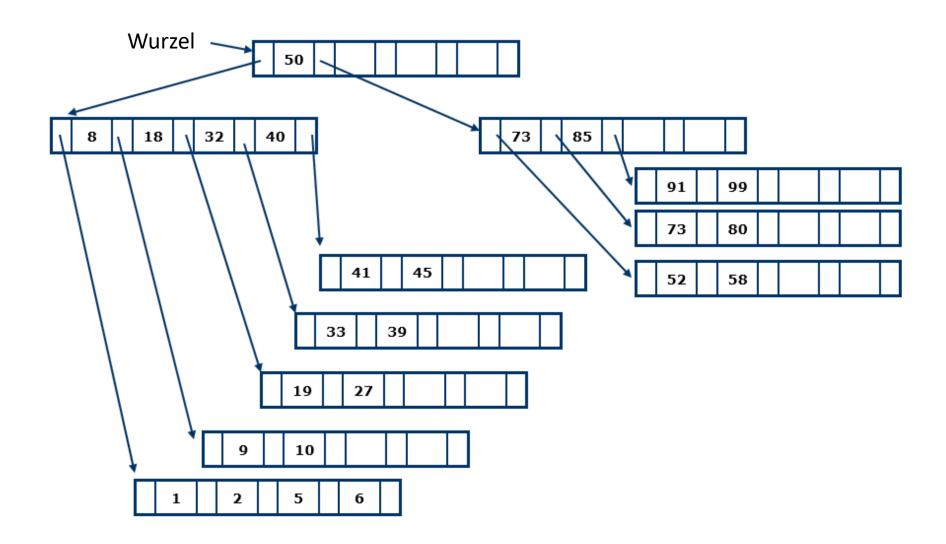

- Der Knoten E wird das rechte Kind des Knotens C
- Der Knoten D wird das linke Kind des Knotens E
- Der Knoten C wird das linke Kind des Knotens G

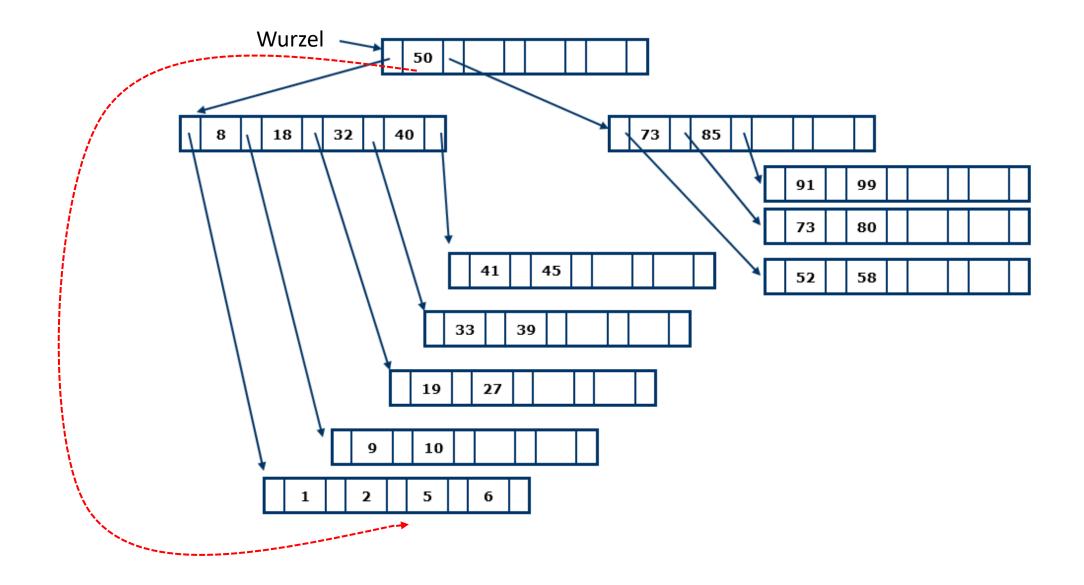

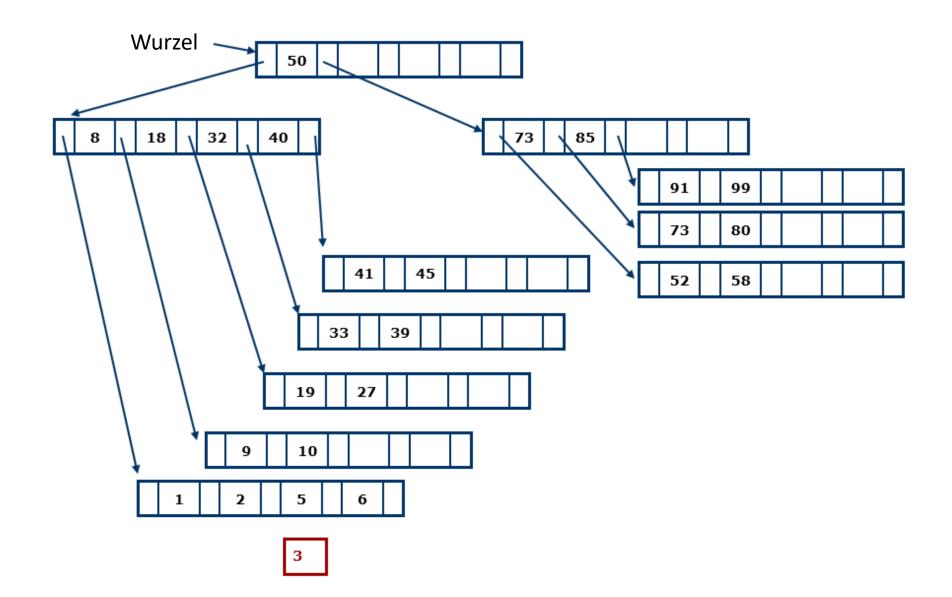

#### Gegeben wird folgender B-Baum Index mit Ordnung 2:

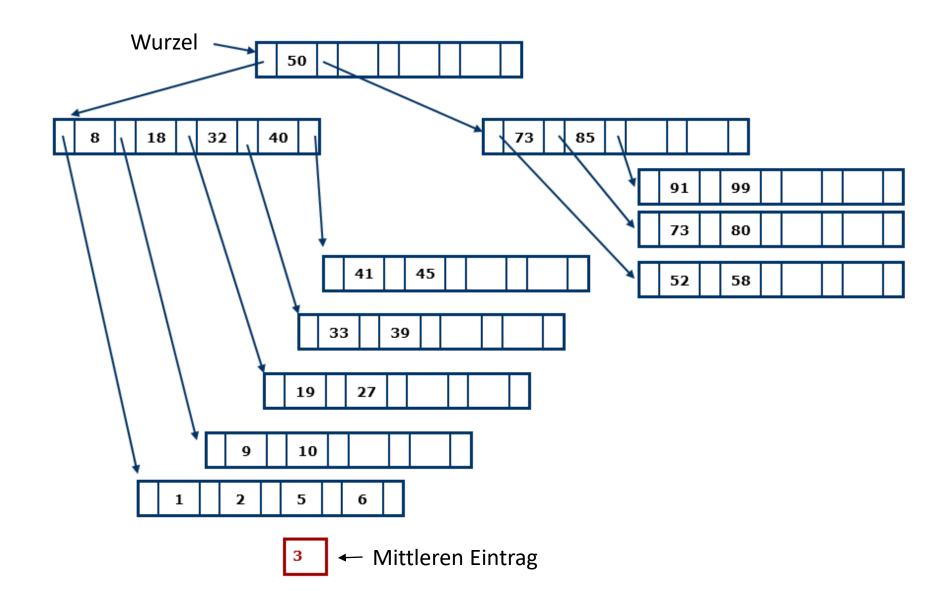

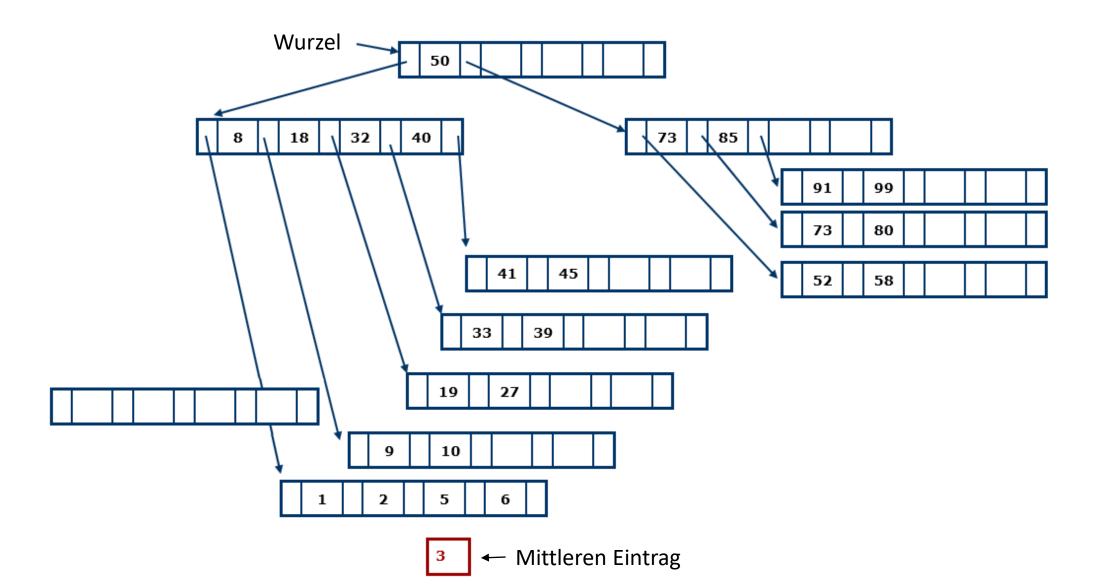

- 1. Füge den Dateneintrag mit Schlüsselwert "3" ein.
- 2. Lösche den Dateneintrag mit Schlüsselwert "8" mit Balance-Operationen
- 3. Lösche den Dateneintrag mit Schlüsselwert "8" mit Merge-Operationen

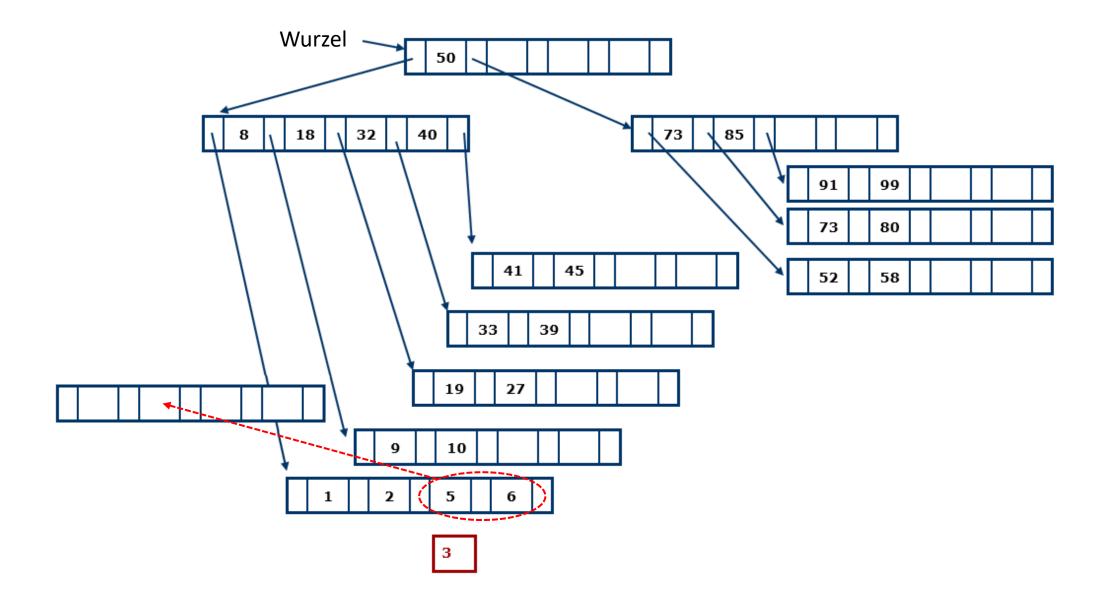

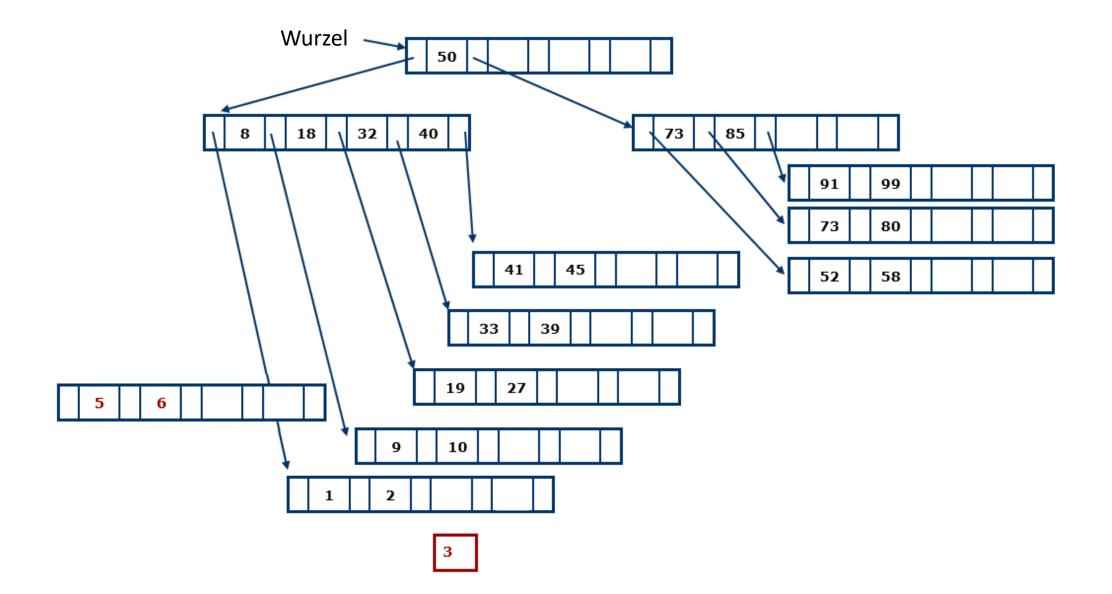

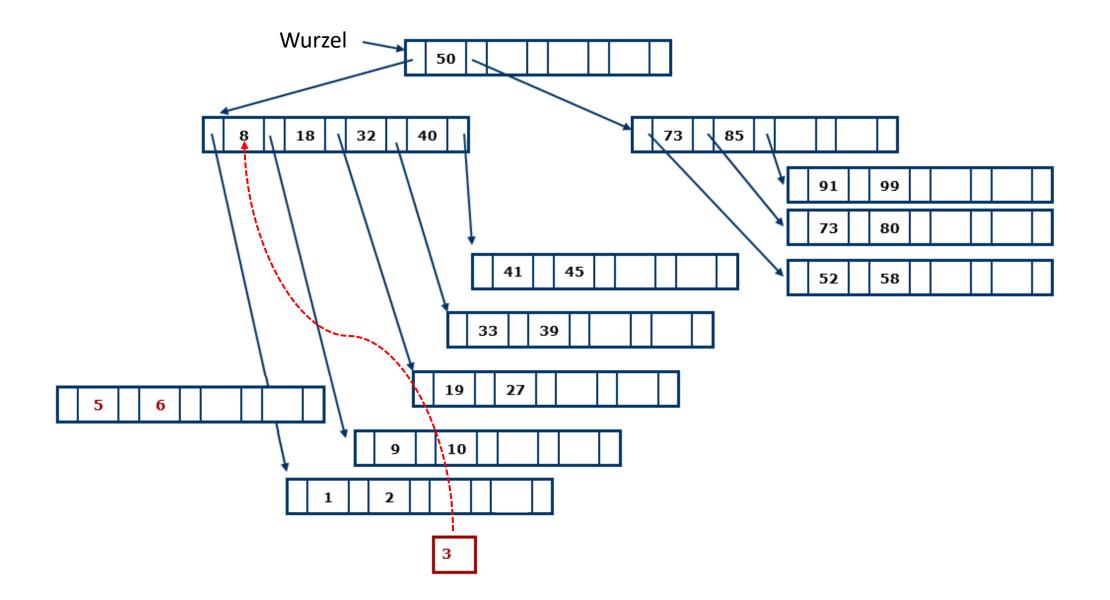

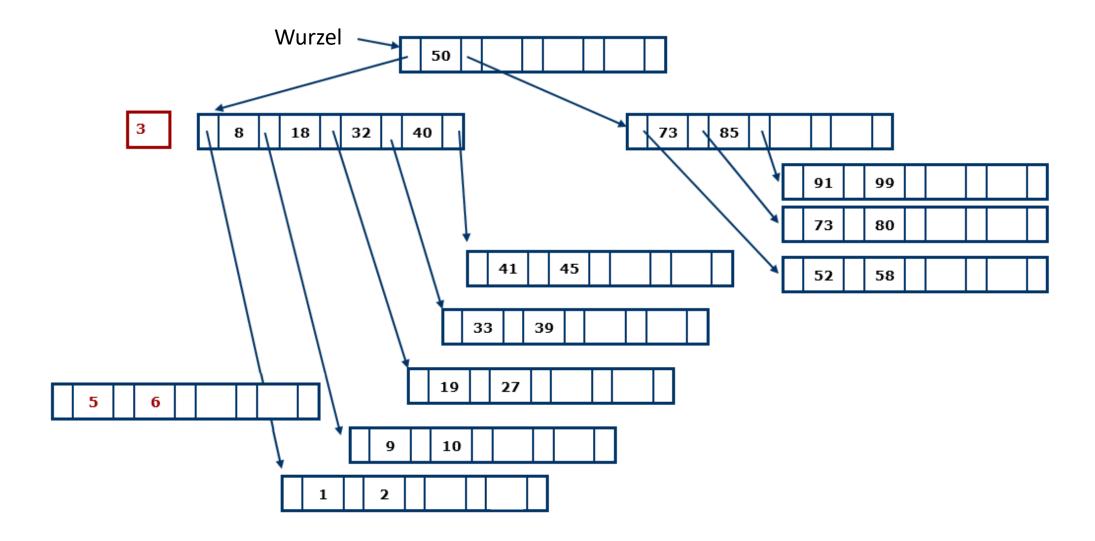

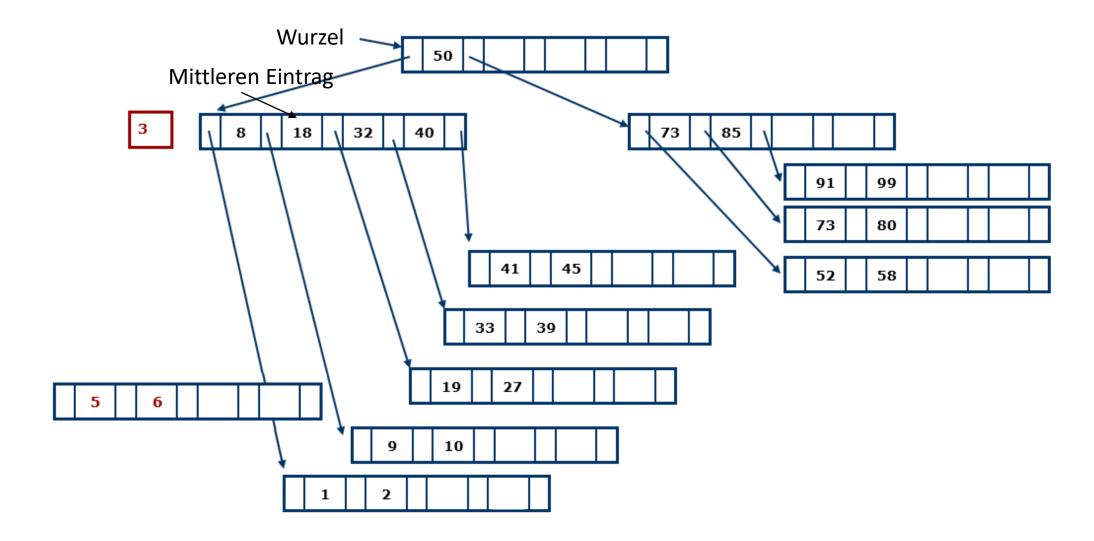

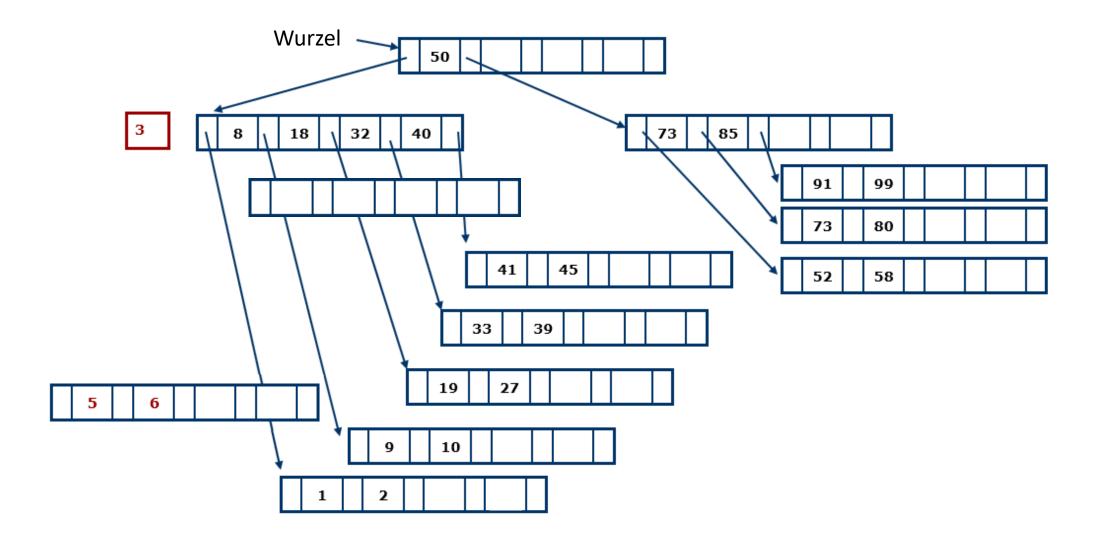

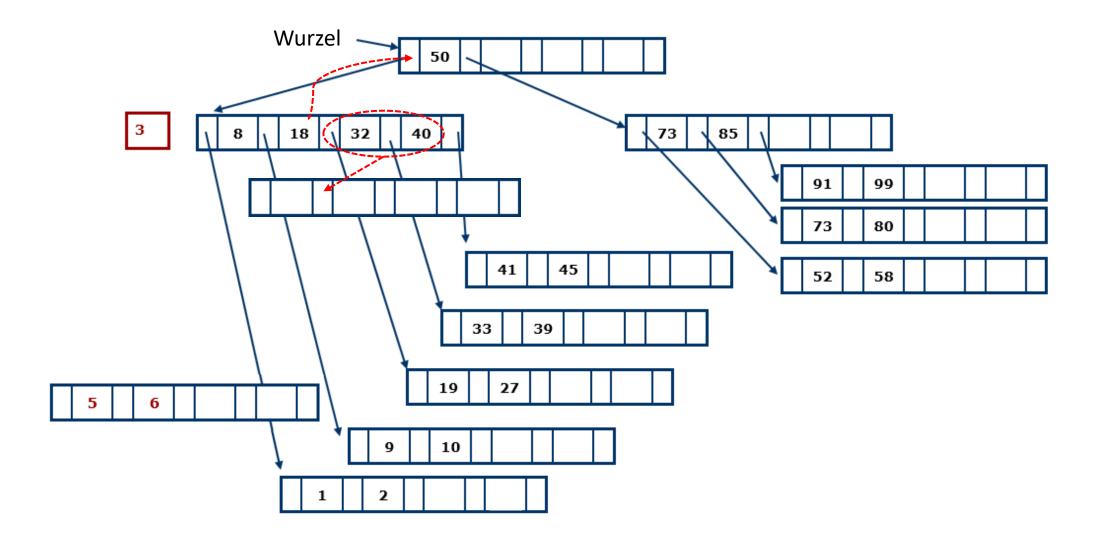

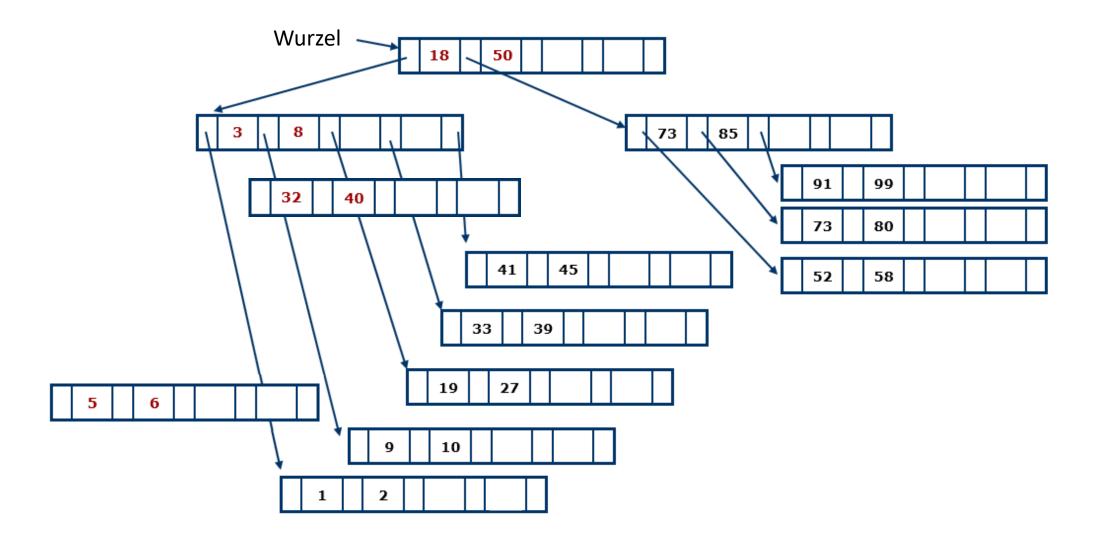

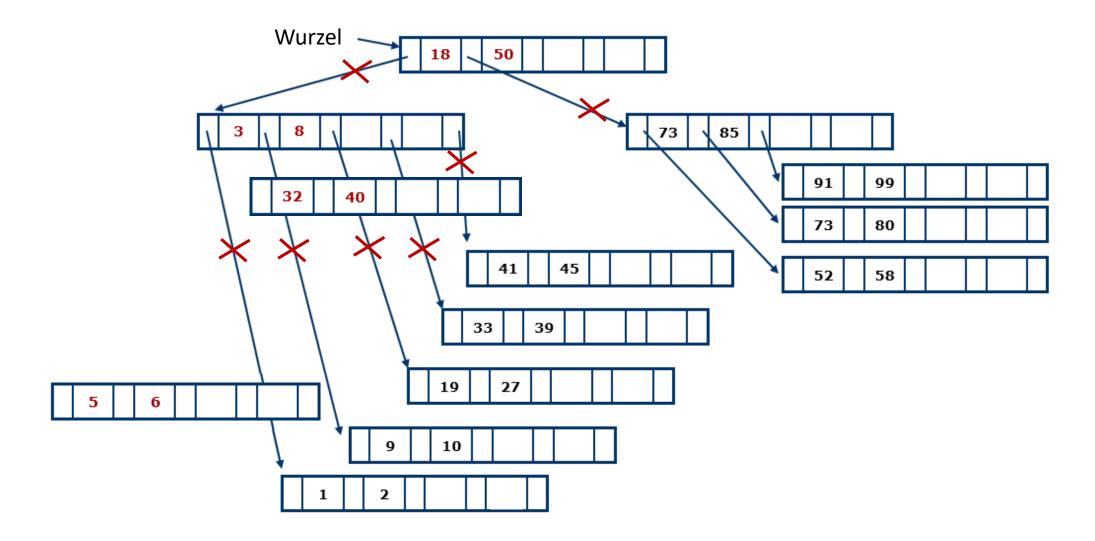

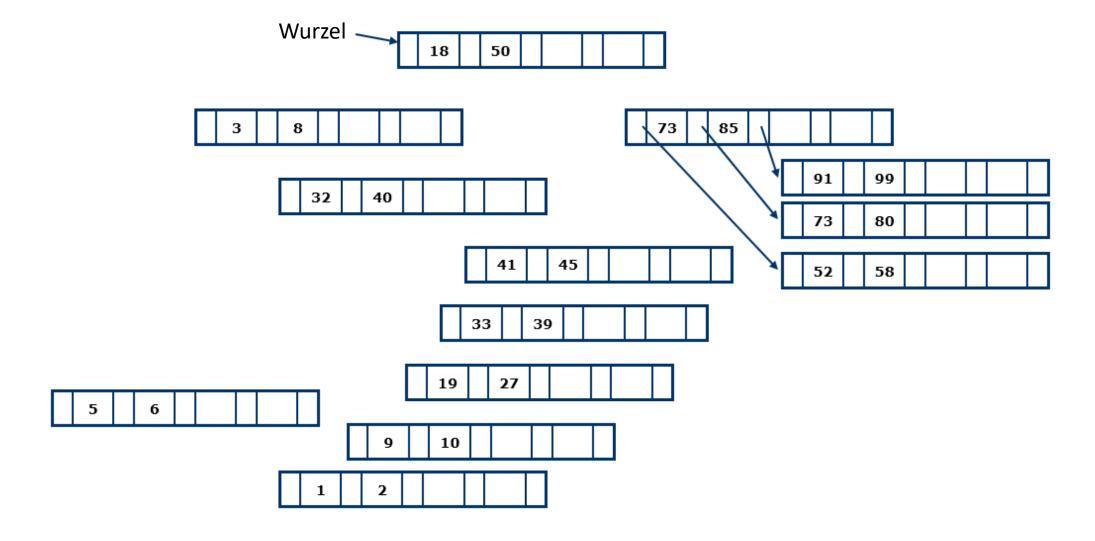

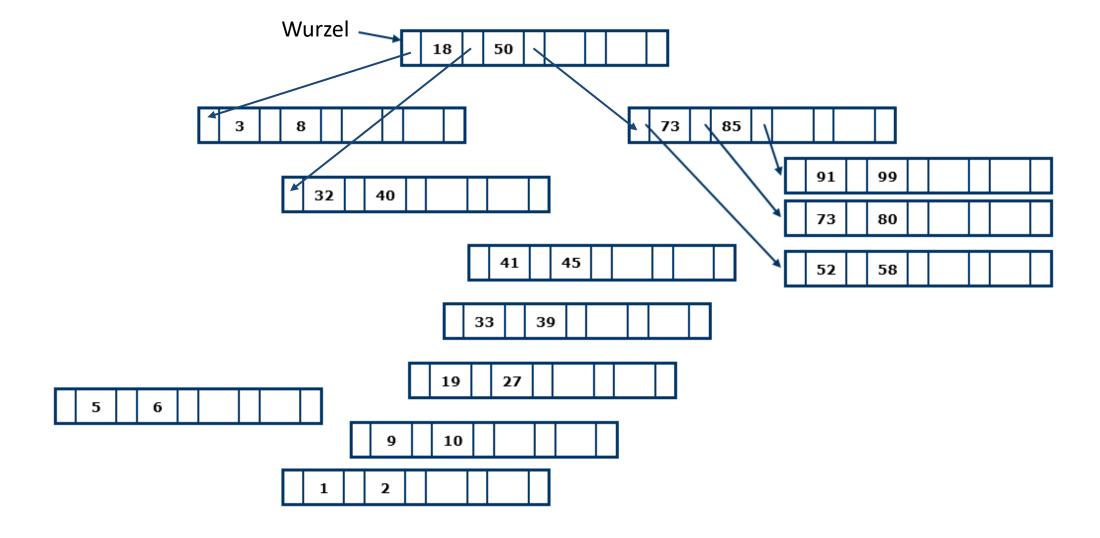

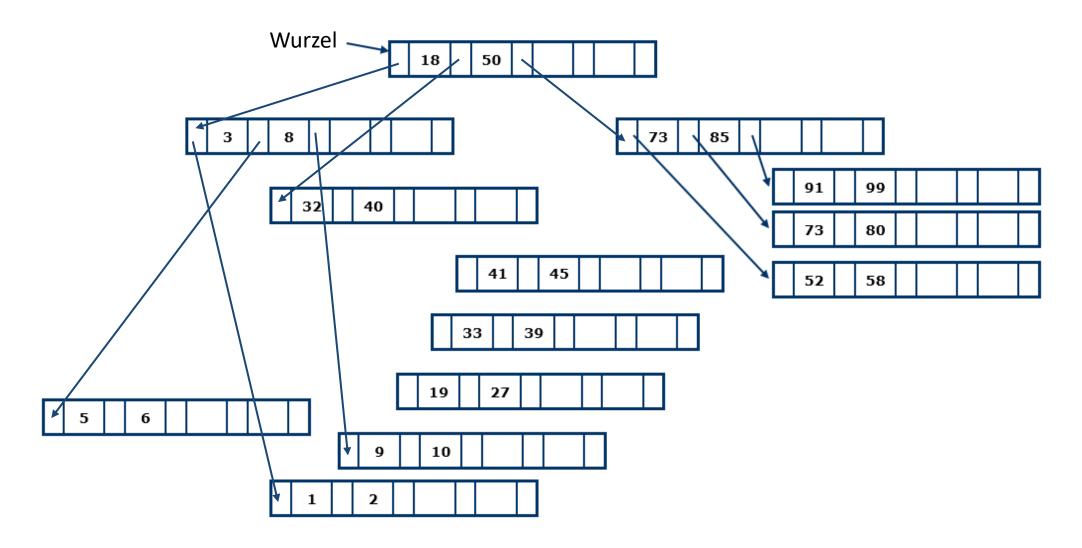

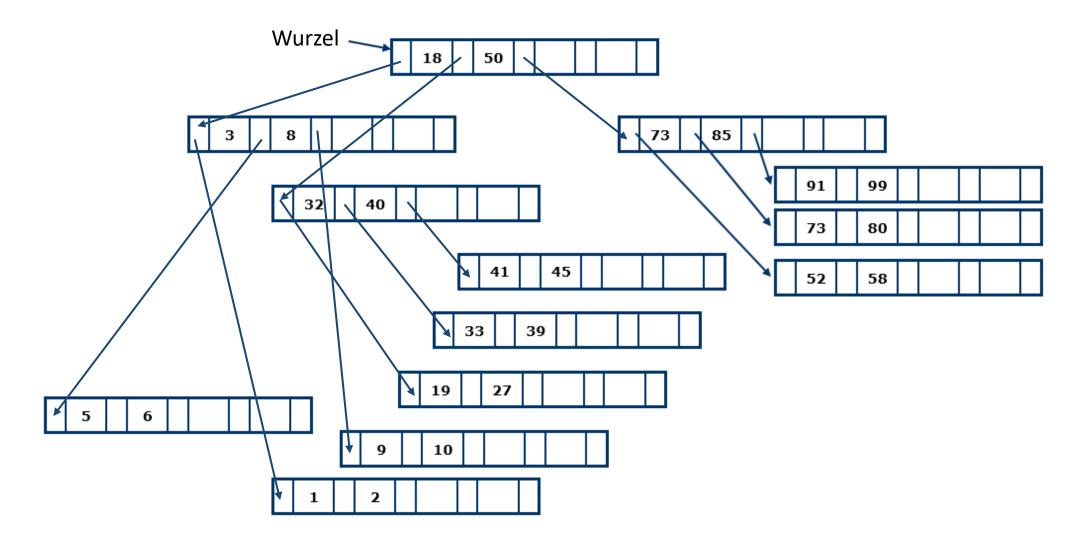

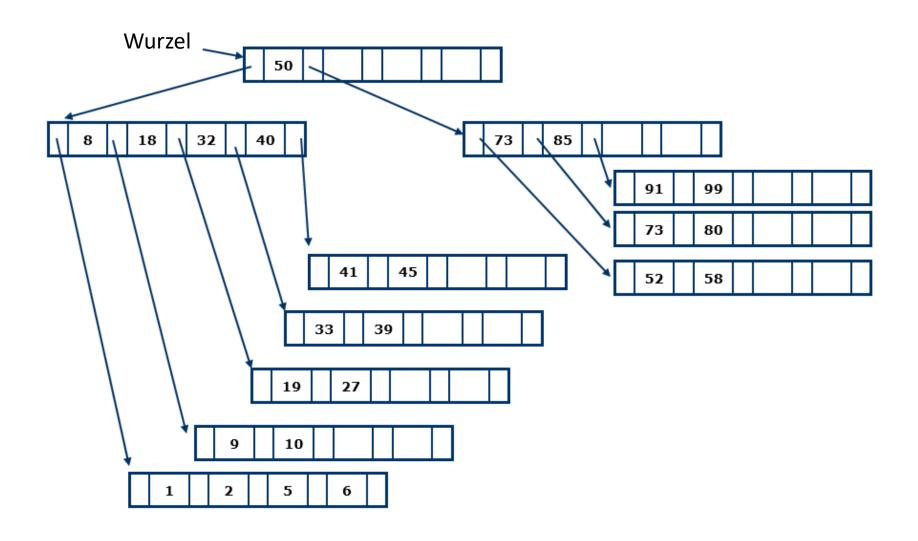

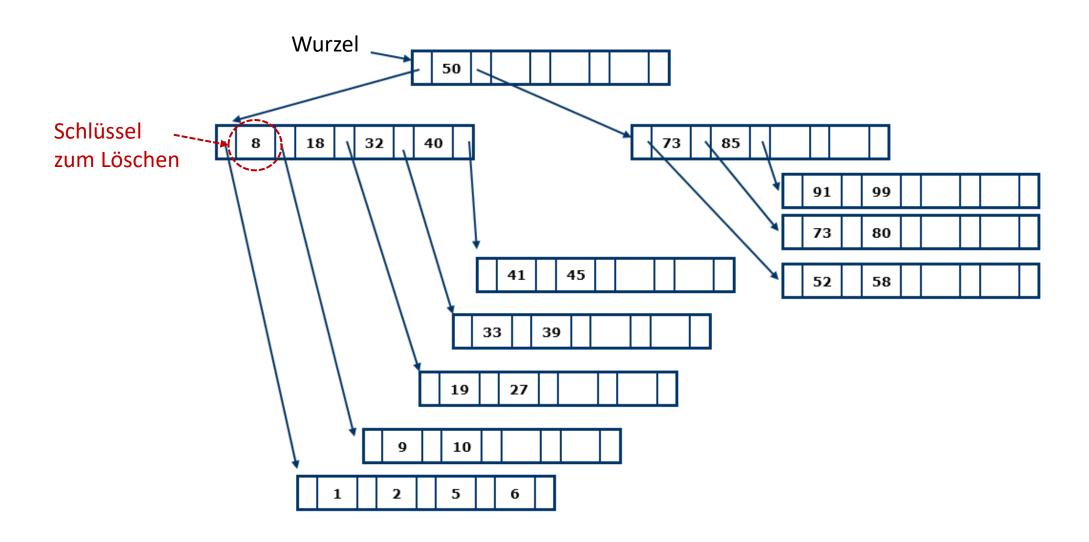

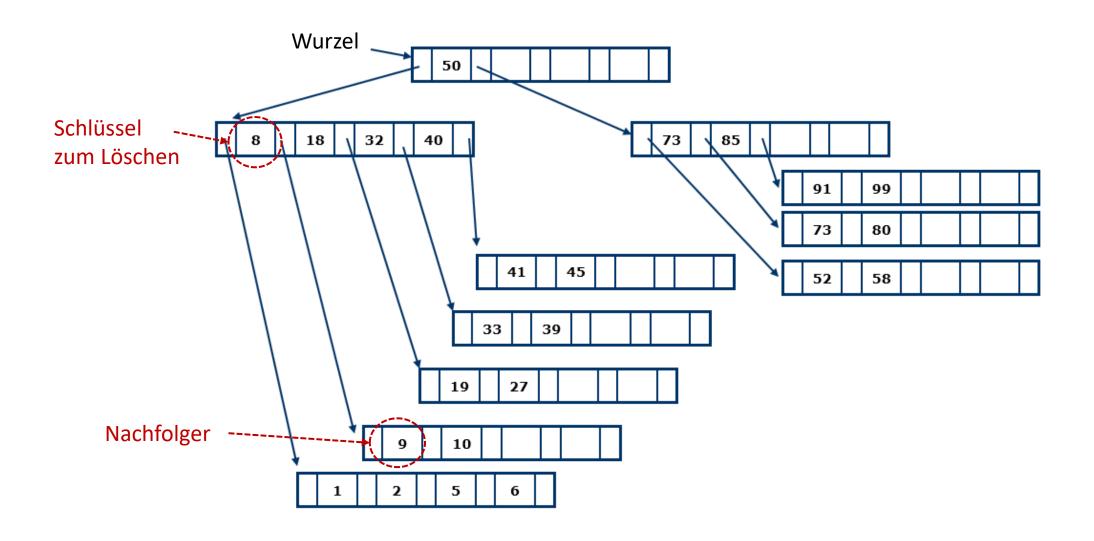

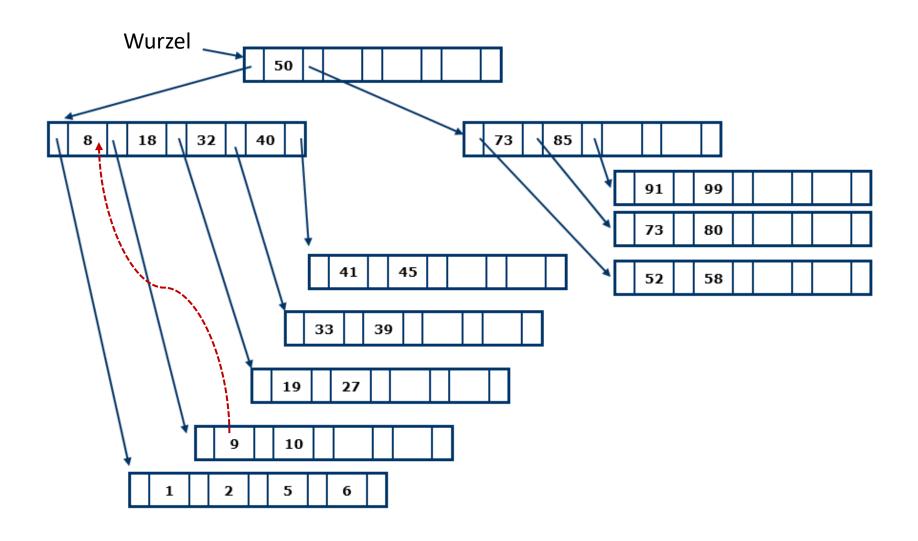

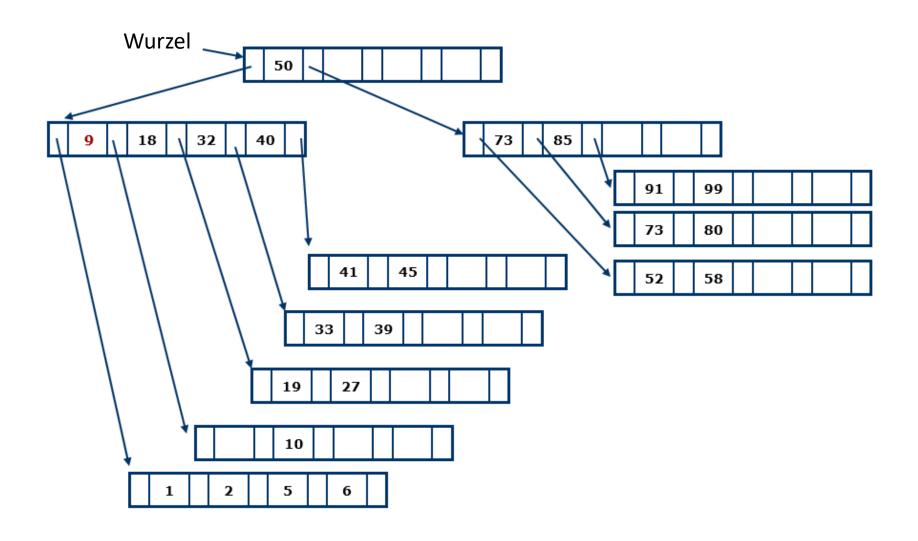

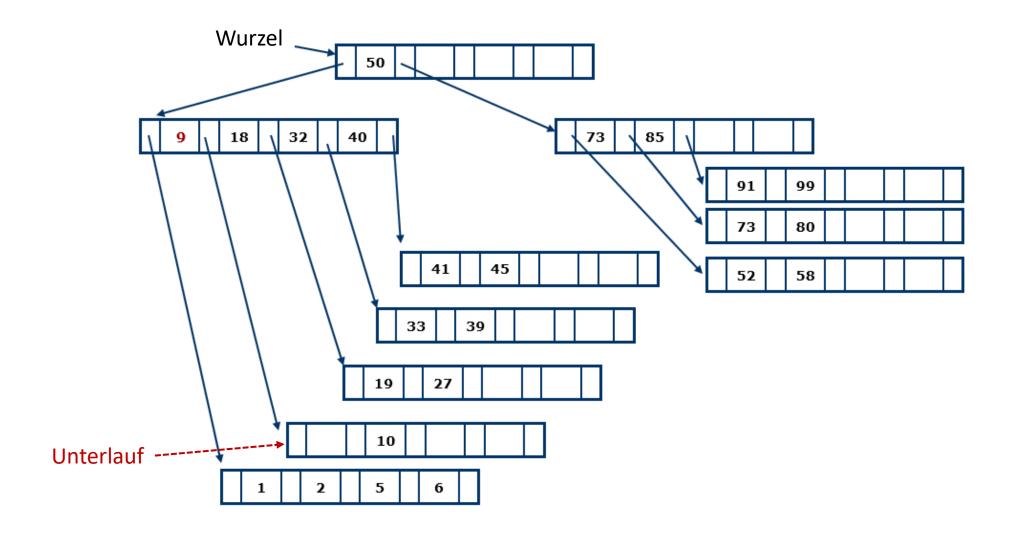

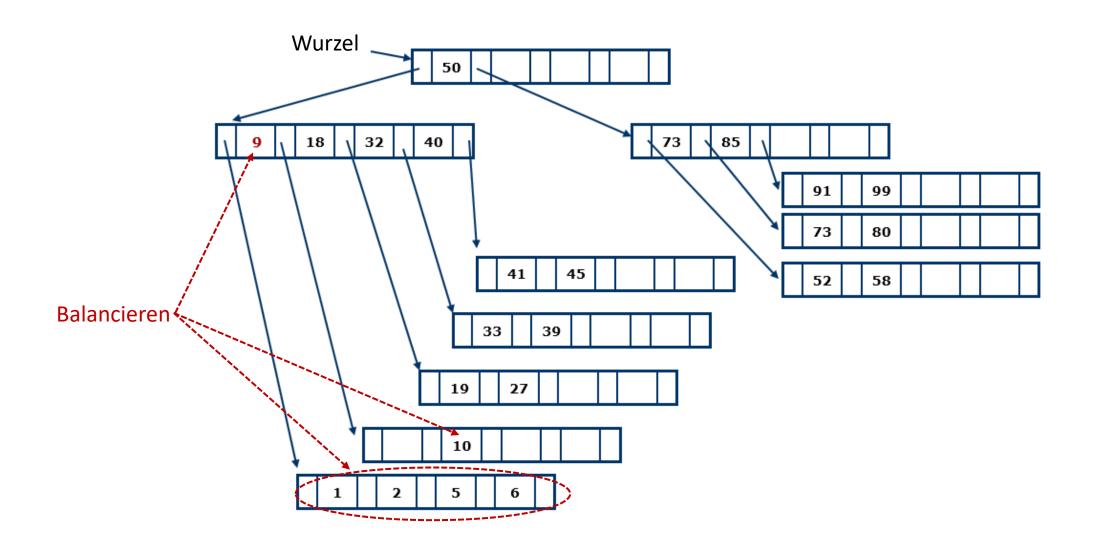

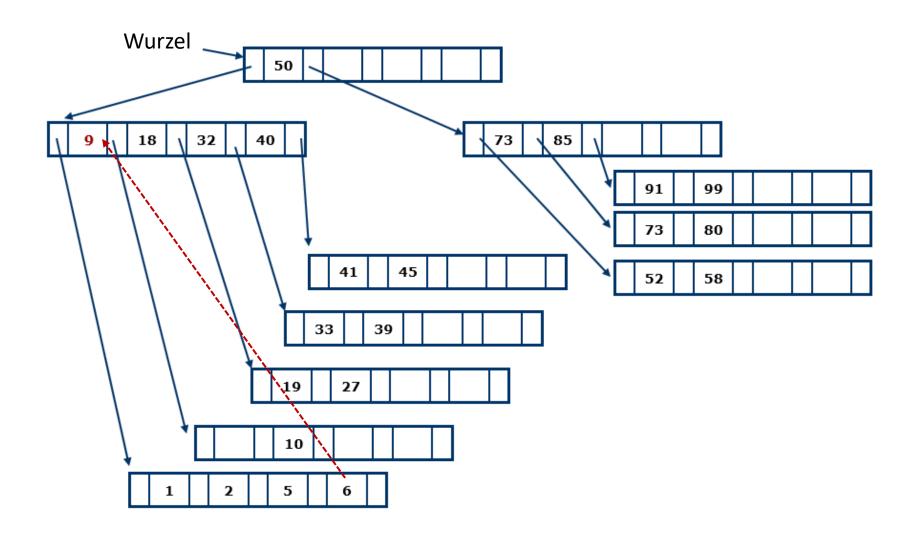

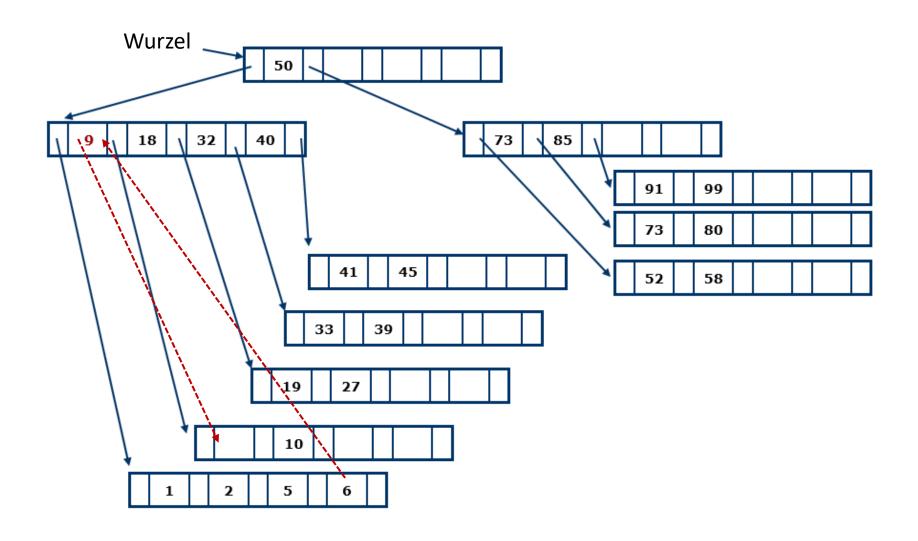

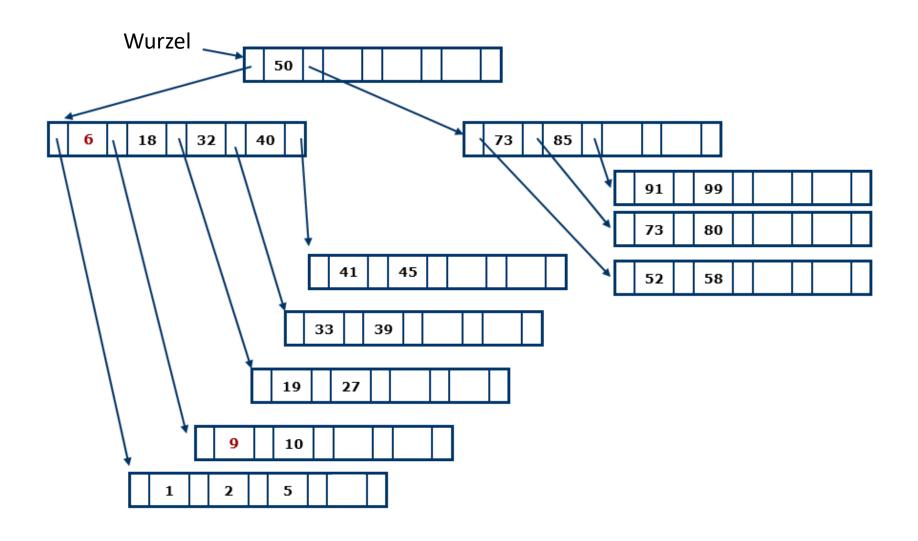

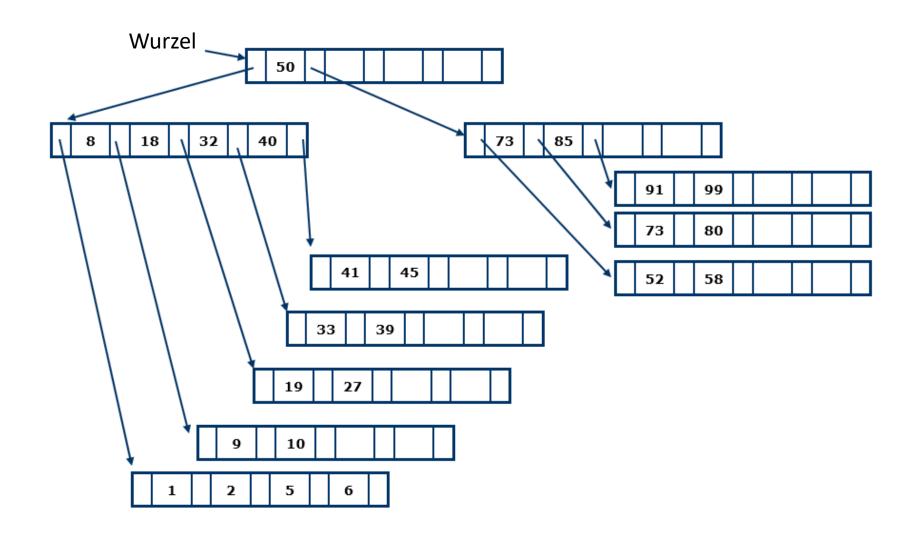

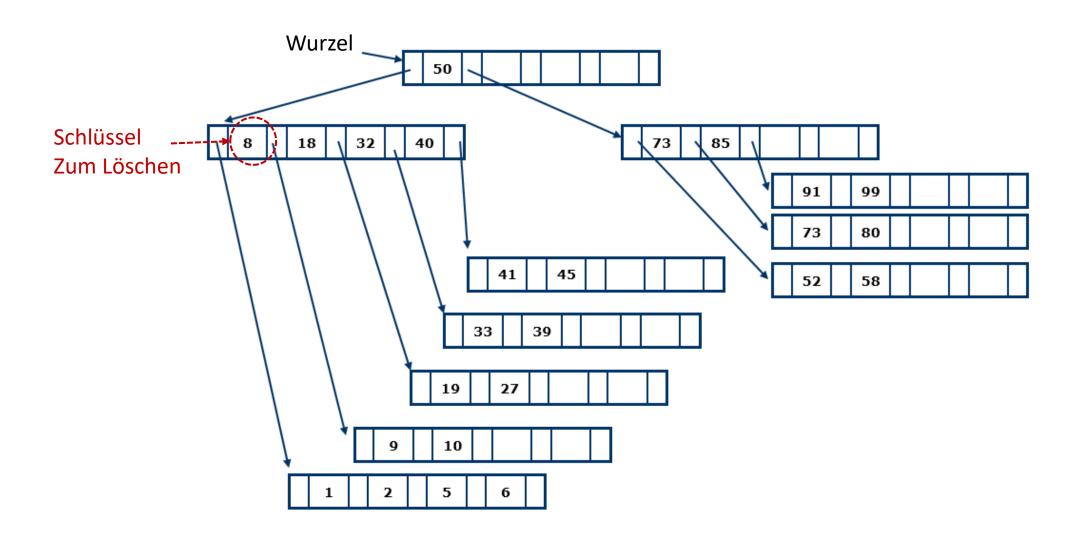

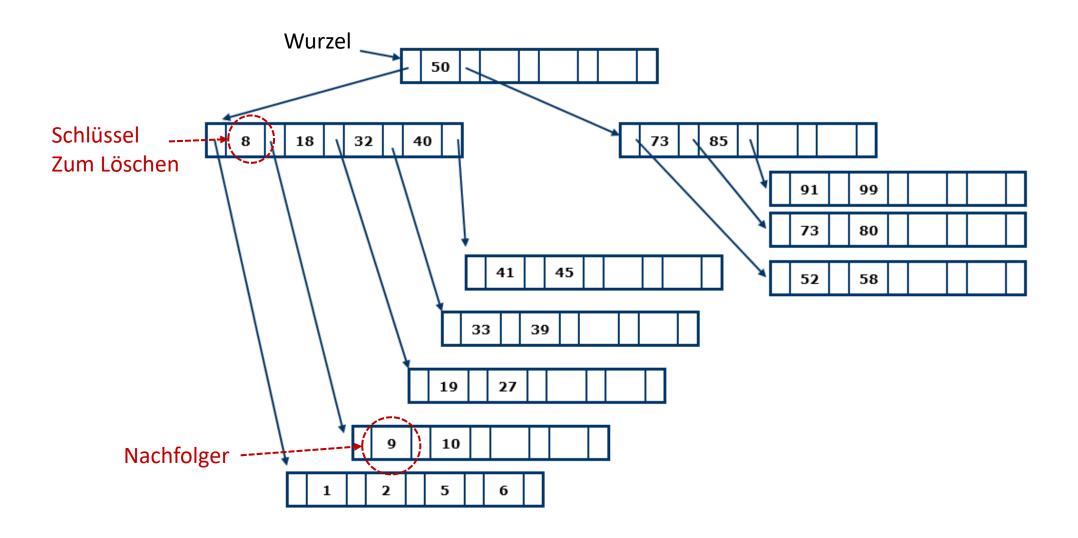

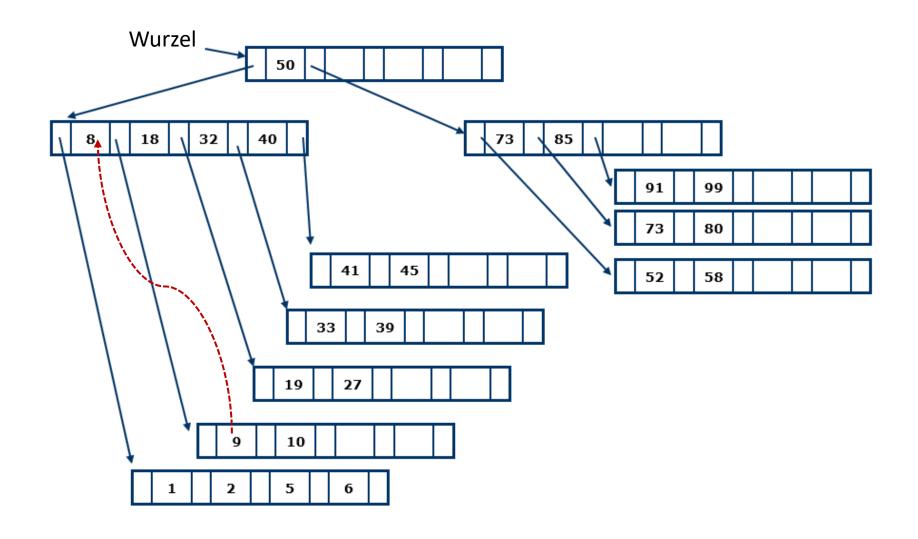

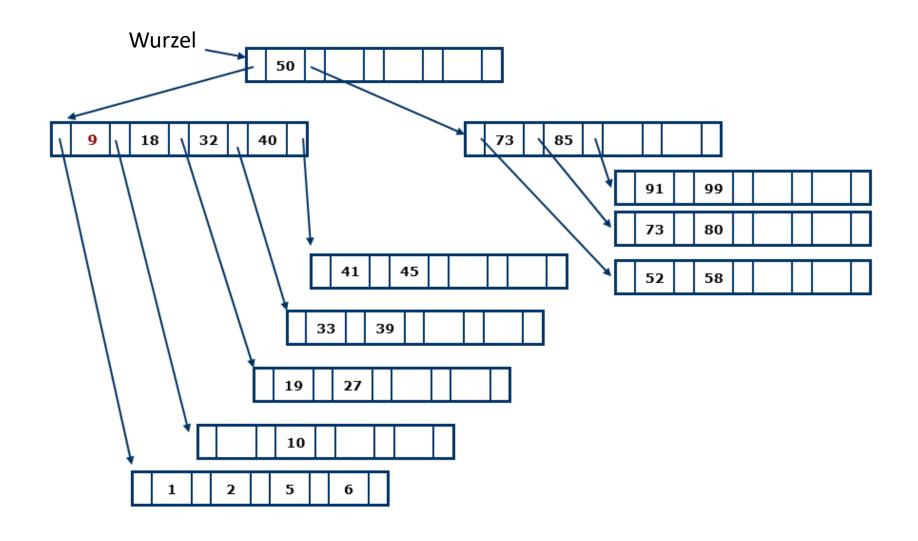

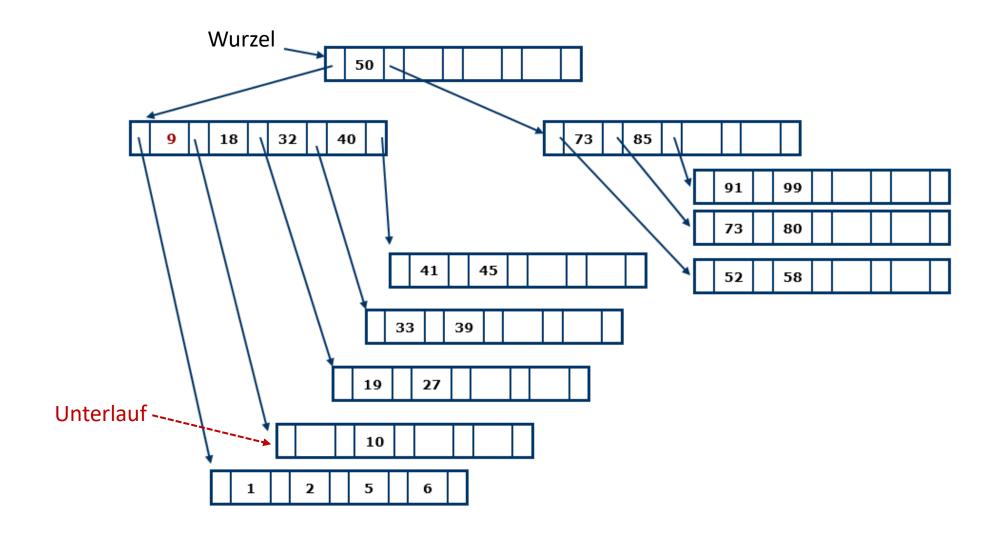

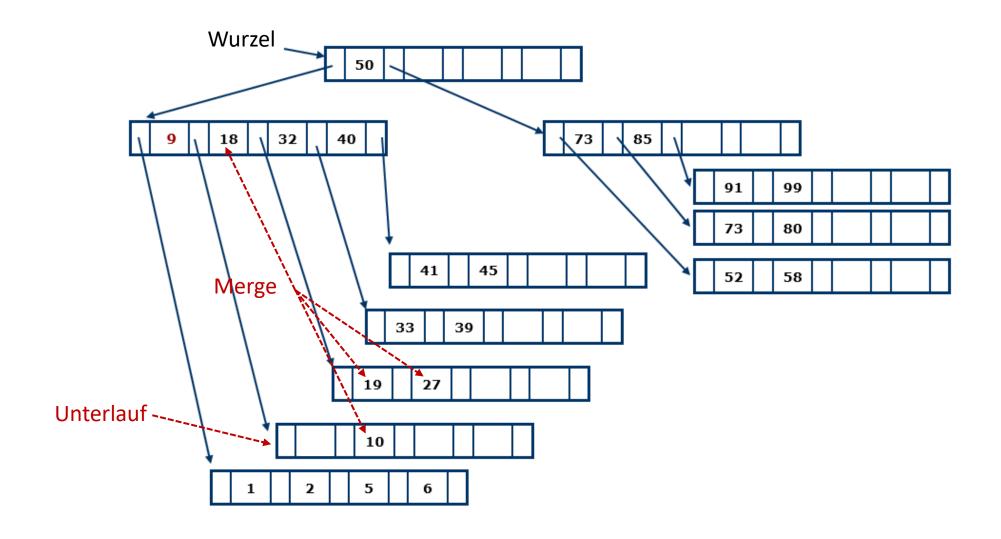

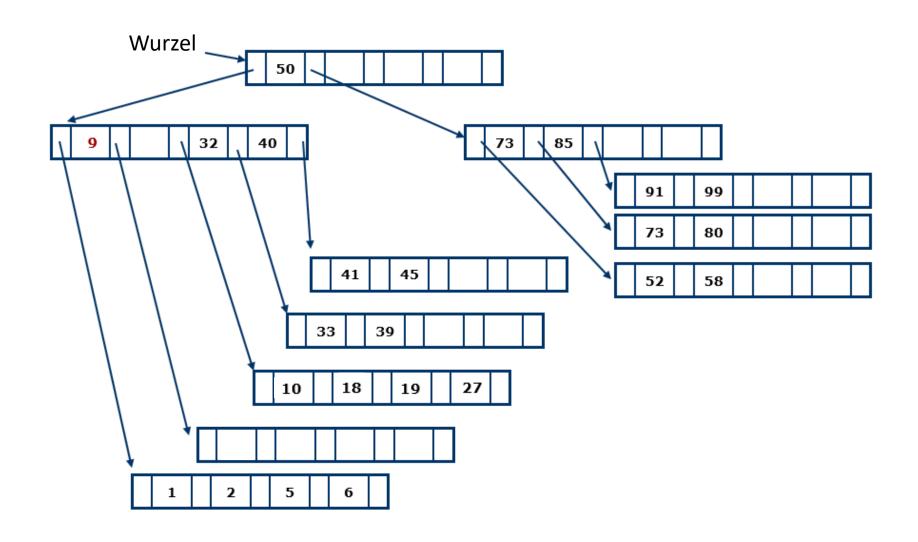

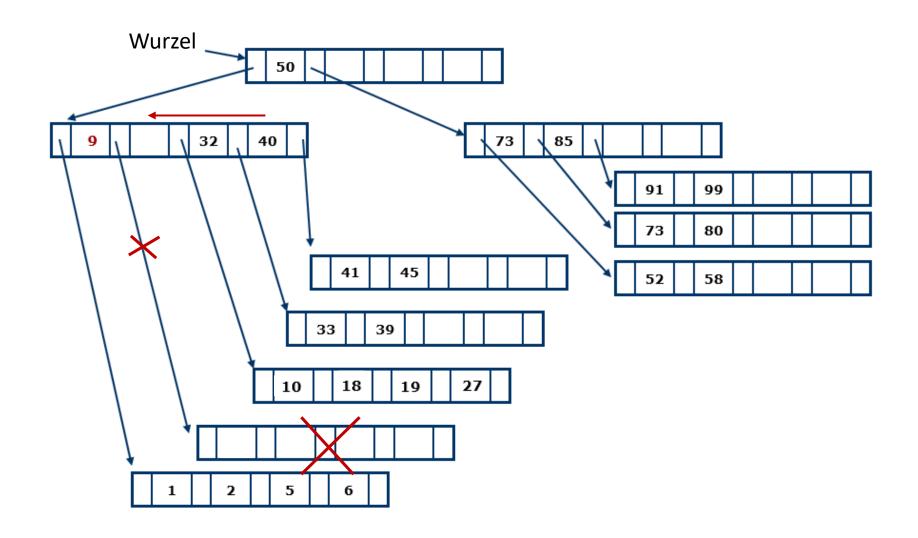

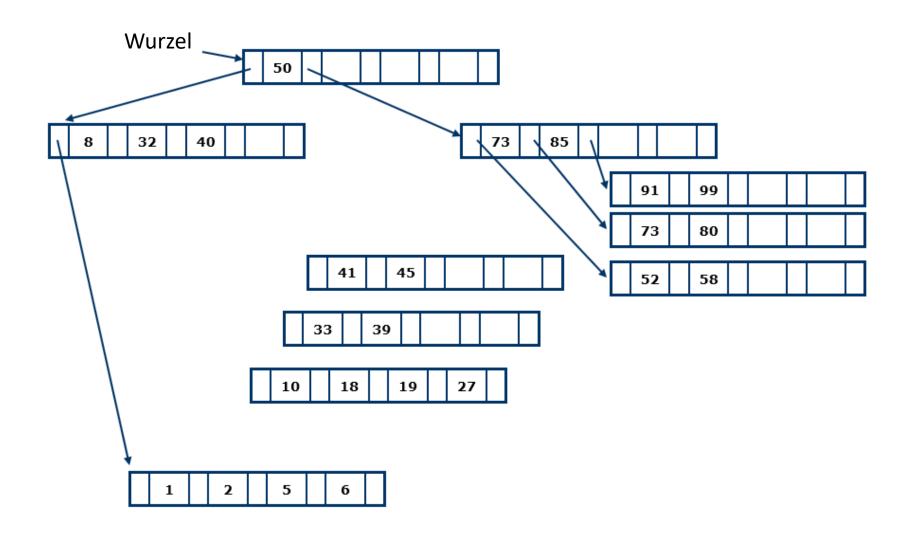

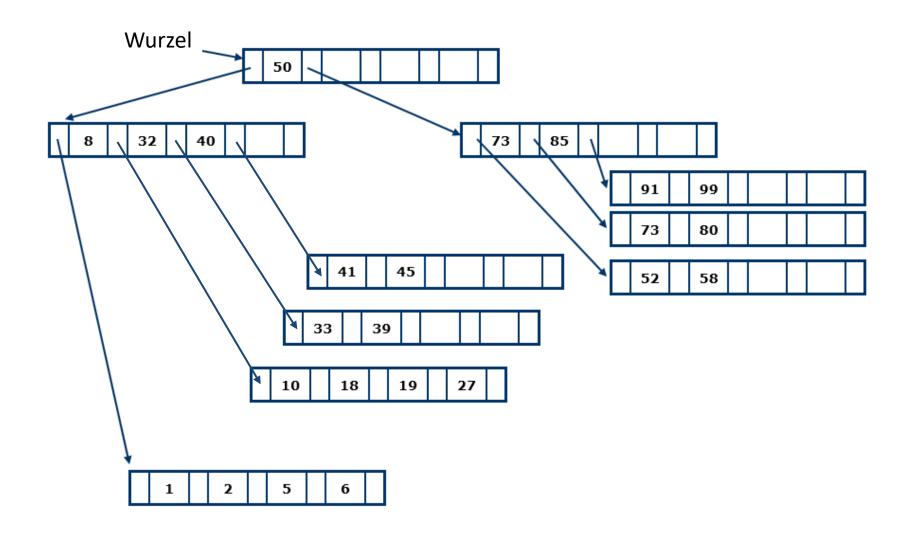

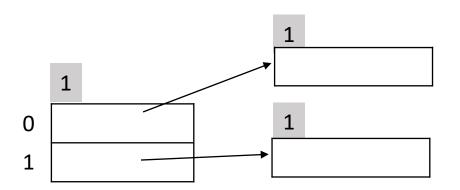

#### Erweiterbares Hashing

Wir benutzen erweiterbares Hashing für eine Datei, die Datensätze mit folgenden Suchschlüsselwerte enthält:

2, 3, 5, 7, 11, 17, 19, 23, 29

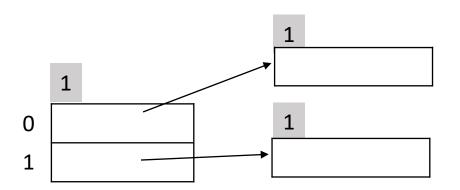

Zeige die Struktur der Hashdatei, wenn die Hashfunktion  $h(x) = x \mod 8$  ist und die Behälter je 3 Einträge speichern können.

2, 3, 5, 7, 11, 17, 19, 23, 29

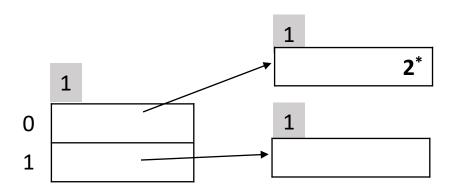

X mod 8	binär
